eCEDA

THE FASTEST, EASIEST WAY TO COMMUNICATE CURRENT HOSPITAL CENSUS DATA

eCEDA provides timely electronic notification of inpatient hospital activity, enabling you to manage stay events on a current basis. Additionally, it enables secure 24/7 access to multiple sources of information in one convenient application.

Long Term Value

- More timely receipt of reliable information
- Reduction in aberrant expenditures
- Reduction in costs associated with unnecessary bed days
- Minimal "front-end" costs
- Straightforward and user-friendly with minimal adoption time
- Administrative cost savings
- Enhanced "Length of Stay" and "Level of Care" management capability

"eCEDA has helped us reduce unnecessary utilization and improve staff efficiency."

Dan Castillo, County of Orange MSI Administrator

Enhance the admission notification process.

eCEDA electronically uploads daily inpatient census notification from regional hospitals to provide you with timely notification of your patient population's hospital activity. This eliminates delays and enables you to recognize and manage hospital stay events on a current basis.

Increase census notification reliability, while saving administrative costs.

eCEDA allows the Payor to increase the notification reliability through our electronic process. Tracking and management of patient admit data is more effectively managed in this electronic environment. Existing communications processes are streamlined, reducing administrative costs.

Step out of the "paper" environment.

eCEDA takes hospital daily census data collection out of a "paper" environment and into an electronic environment. By automatically aggregating census data from multiple hospitals in electronic format, eCEDA enables effective stay management and efficient communication between interested parties. Additionally eCEDA provides direct data downloads, eliminating time-intensive and error-prone manual entry.

Manage bed day costs more effectively.

eCEDA reduces aberrant bed days by providing timely notification of inpatient hospital stays. This enables early-stage intervention and reduces costs while improving the efficiency of utilization.

Track Level of Care and Length of Stays on a current basis.

eCEDA allows you to track changes in Level of Care and Length of Stays in coordination with hospital case managers. Avoid payment disputes before they happen by using eCEDA as an ongoing audit tool to reconcile authorized bed days against billed bed days.

Standardize disparate data formats.

eCEDA takes in disparate data from multiple hospitals and standardizes the data output making it easier for the Payor to integrate and use in management of patient stays and overall resource utilization.

eCEDA Technologies

***e**CEDA maintains the highest levels of security and confidentiality*

- Flexible and customizable multi-user access control
- Three-tier system architecture ensures security and scalability
- 128-bit SSL encryption
- HIPAA compliant
- 24/7 site monitoring and backup ensure consistency and availability
- Sensitive data including user password and database backups are encrypted

*"eCEDA is a powerful tool that not only allows the Medical Management team to manage the patient days, **but also allows the Medical Director to manage the team."***

Phil Bryson, Former Health Plan Medical Director

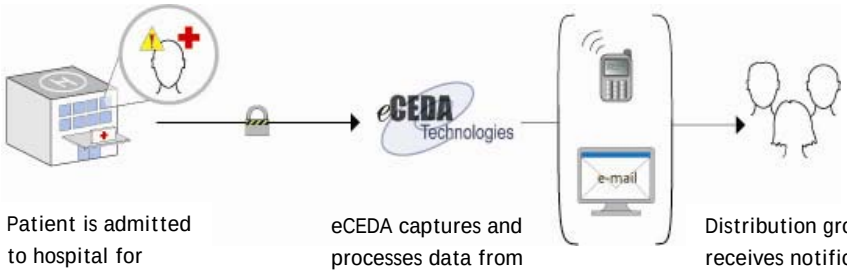
eCEDA is simple to adopt and use, with minimal implementation costs.

As a web-based application, eCEDA harnesses the power of the internet to facilitate data communication. This enables timely notification and secure 24/7 access to data with no new investment in hardware. Additionally, eCEDA can be implemented transparently and with minimal costs.



Patient is admitted to hospital for treatment.

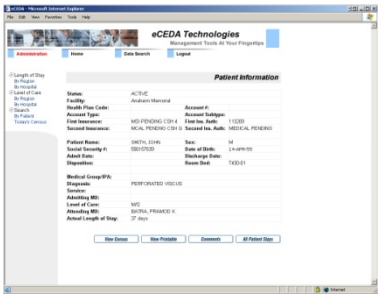
eCEDA captures and processes data from hospital.

Distribution group receives notification of the event via text message or e-mail.

When a patient is admitted to the hospital, eCEDA makes Payor notification quick and reliable. Users can securely access detailed hospital census data 24/7 from any computer with an internet connection.

eCEDA provides convenient access to multiple sources of current information.

eCEDA provides convenient 24/7 access to multiple levels of current and historical patient information, ranging from regional Level of Care to hospital patient census detail enabling efficient and effective patient stay management.



Advanced search tools and customizable data sets enable efficient management of patient stays. eCEDA makes it easy to utilize both current and historical data for decision support.

eCEDA delivers substantial Return on Investment (ROI)

- **A 5% reduction in bed days through quicker intervention and management can produce a greater than 3 to 1 ROI**
- **Administrative cost savings are easily quantifiable and realized**
- **More effective case management leads to long term savings**
