SAN DIEGO'S HEALTH CARE AGENCY GOES LIVE WITH WEB-BASED ENROLLMENT AND ELIGIBILITY DETERMINATION THROUGH NETCHEMISTRY'S AUTHMED PLATFORM

NEWPORT BEACH, Calif., May 12, 2008 - NetChemistry, a top-tier software provider to the Government Health Services Sector announced the successful launch of the AuthMed platform for the web-based enrollment and eligibility determination of San Diego's County Medical Services (CMS) population.

AuthMED is a web-based eligibility determination and enrollment solution for multiple health and human service programs. It provides a simple and seamless way for organizations to enroll new applicants, track their status and manage their electronically stored information completely online.

"Not only will this system create efficiencies on the front end, but it also streamlines the back-end eligibility determination process," said Chris Cruttenden, president of NetChemistry. "For the public in general, electronically managing healthcare eligibility in an efficient manner will decrease health care costs for everyone involved."

CMS is not a health insurance program. Funded solely by local dollars, CMS assists medically indigent adults who are not eligible for other governmental health care programs. The CMS program has a defined scope of services and eligibility criteria, serving people who have a current medical need, and no other financial resources to pay for those services. CMS payments covers hospital, physician, pharmaceutical, home health, skilled nursing facility and durable medical equipment costs.

"When paper gives way to the Internet, improvements in application approval times are only the beginning," Said Tom Murphy, Senior engineer at NetChemistry. "It is the first step in allowing individuals to better understand and access their local public health care services.

In addition to AuthMed, NetChemistry has launched its Provider Online Verification (POV) system that allows Providers contracted with the CMS program to go online and verify patient eligibility 24/7. The immediate feedback on a patient's eligibility can potentially reduce the number of deniable days and increase the access to care.

About NetChemistry
NetChemistry is an Internet solution and software provider to the Health Services industry whose systems have handled billions of dollars in transactions. Combining vertical expertise with their Core Product Suite, NetChemistry specializes in Web-based information enrollment, distribution and tracking systems comprised of secure, scalable software modules that can be rapidly customized to fit the different parameters of each client's needs.

In addition to software development, NetChemistry has provides design architecture, systems integration and managed hosting.
